

**YOUR MODULAR
RETROFIT CONCEPT**

As an expert in condition monitoring, we provide retrofittable hardware and software solutions for the digitalization of machines and processes.

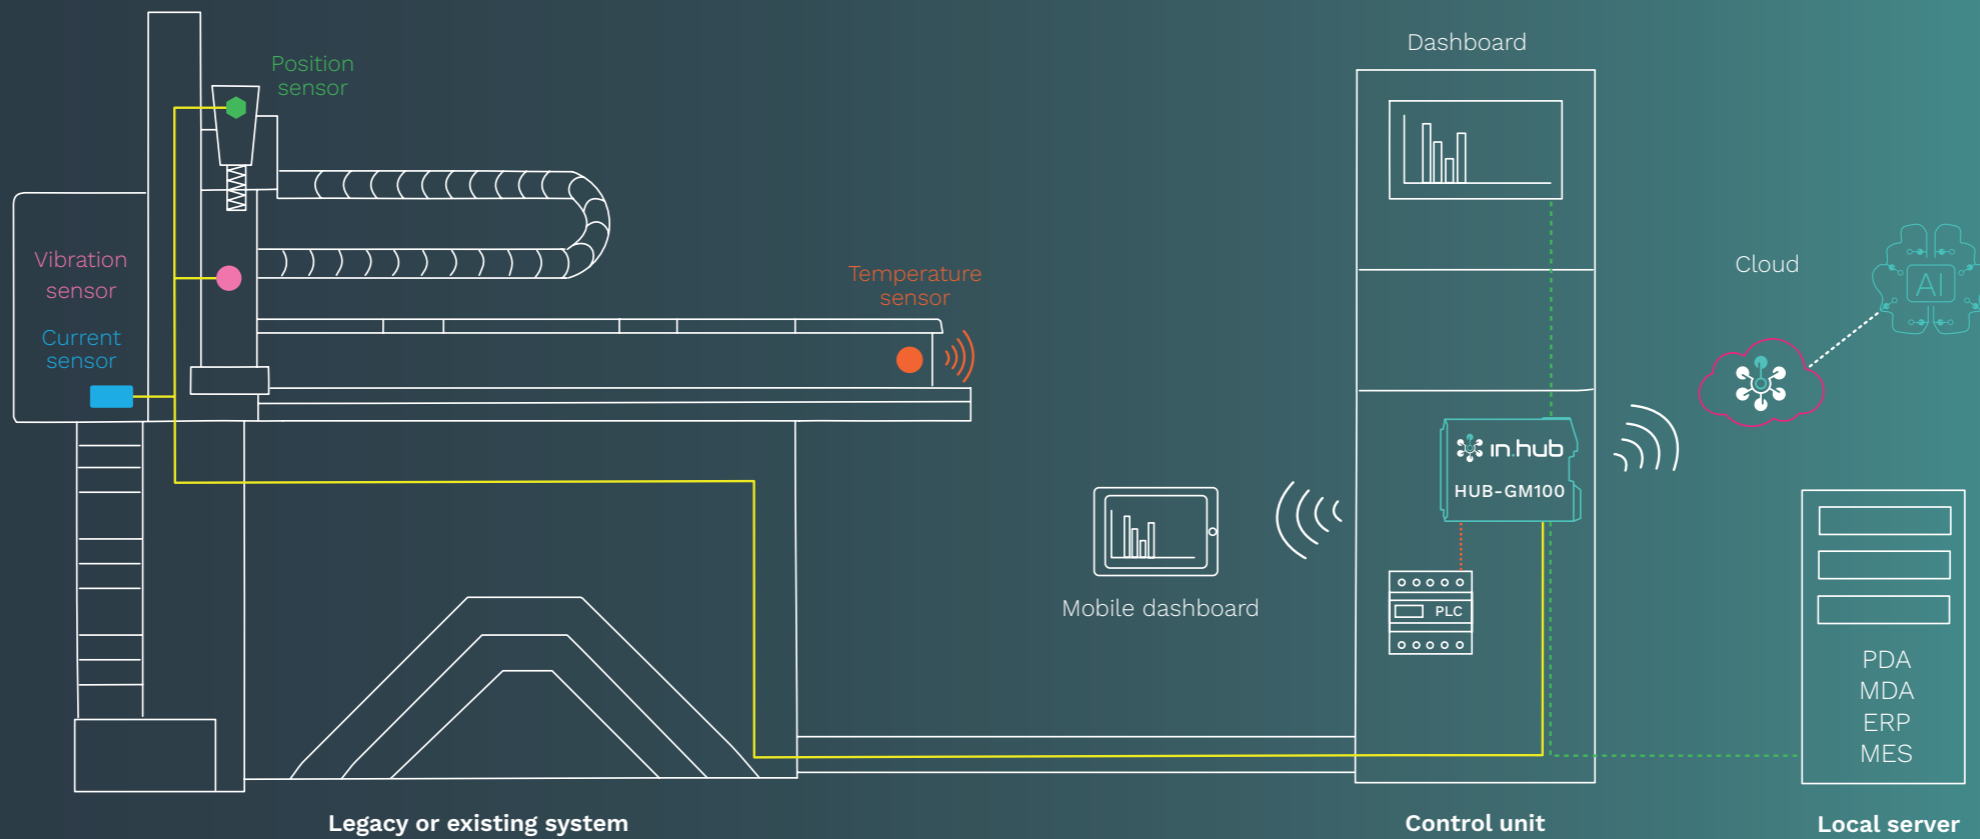

From the individual application scenario...

Your parameters.

- Contamination
- Wear
- Downtime/system availability
- Test results/test mechanisms
- Process events
- Environmental parameters
- Technical cleanliness
- Exposure to corrosion

...through the process of condition monitoring using plug-&-play-capable solutions...

...to the visualization and evaluation of the data.

Added value for you.

- Improvement of quality processes
- Increased system availability Optimization of value-creating processes
- Reduction of downtime rates
- Establishment of digital business models
- Increase in product quality
- Reduction of process costs
- Automation of business processes

1. Data acquisition
Coordinated sensors

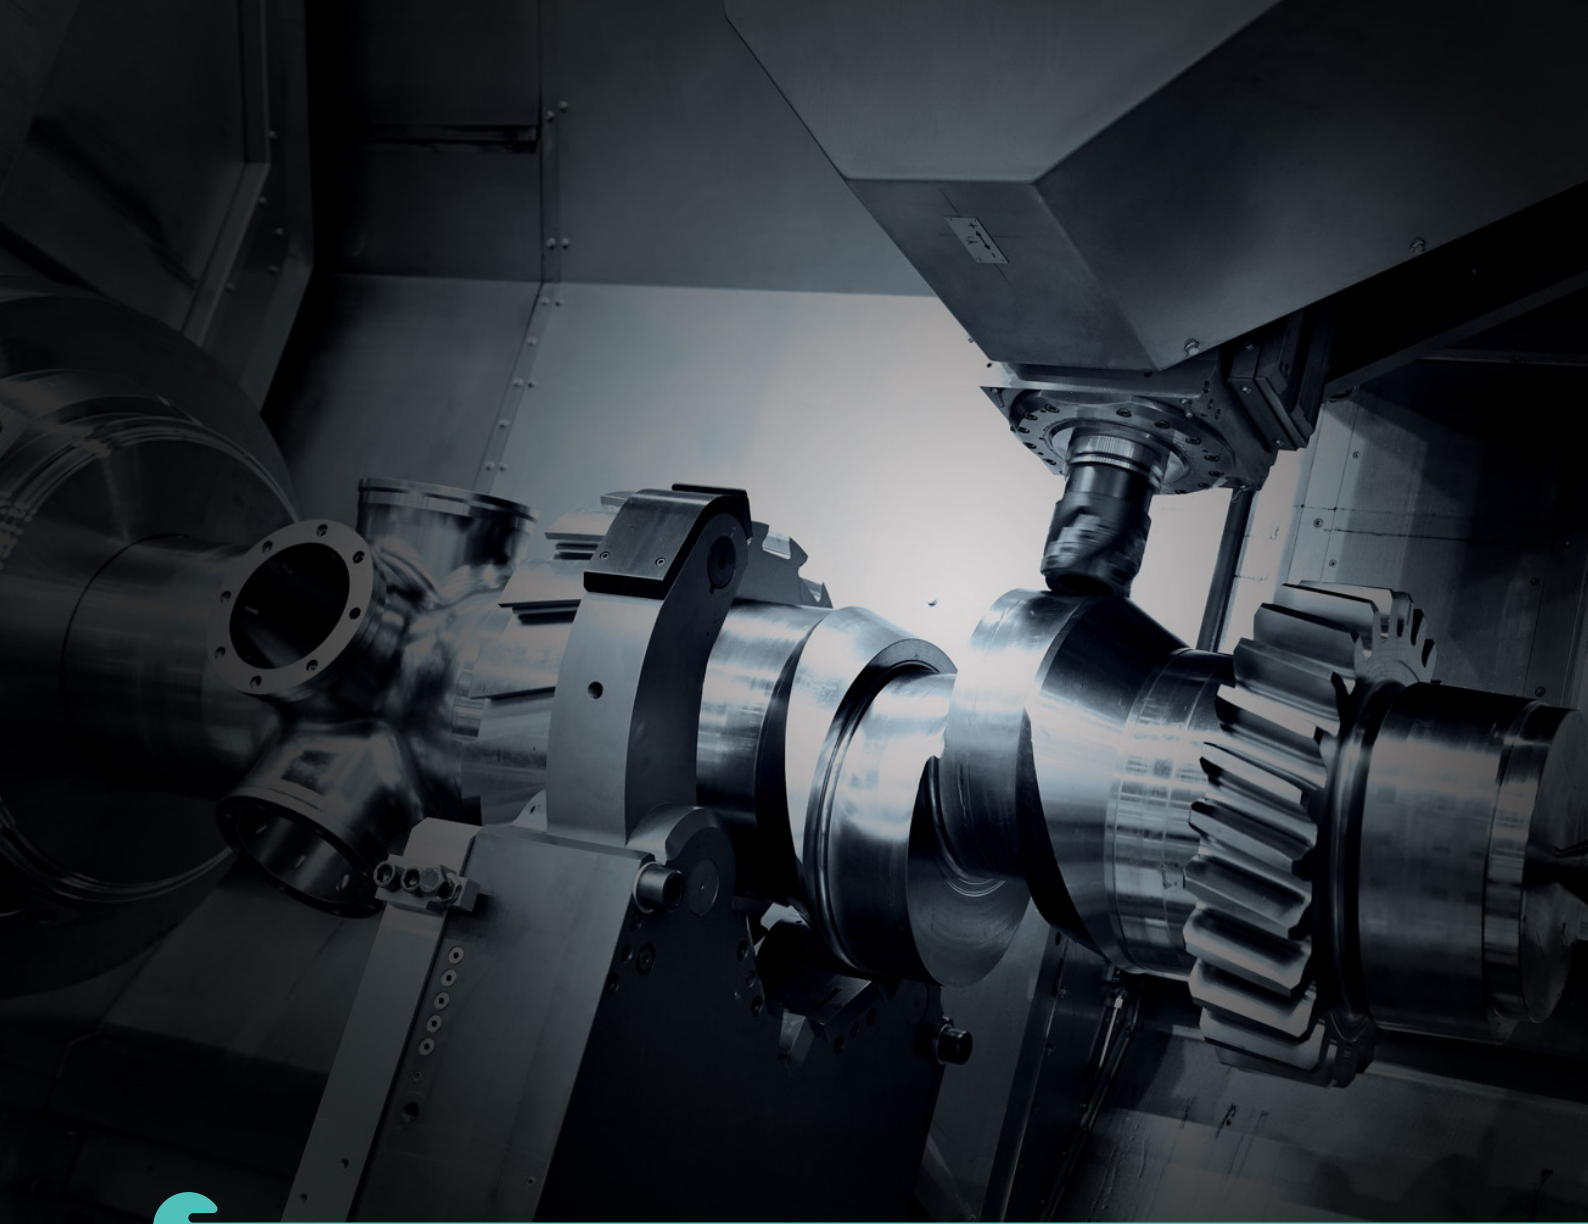

2. Data processing
IoT gateway master module

3. Data networking
Across the entire machine and process landscape

4. Data integration
Cloud-based or on-premises IT systems
